

ABSTRACT (Figure 1)

An illuminated decorative globe has an outer translucent cover 10 forming an enclosure to an inner globe 11. The
5 inner globe is supported on a rotatable frame 13 and a light bulb 15 is mounted inside the globe. A surface of the globe carries an image, such as a world map, that is projected onto the surface of the cover and visible from outside the cover. The image is swept around the cover
10 as the frame is rotated by an electric motor 16.
